AT DHL SUPPLY CHAIN / DHL EXPRESS / DHL ECOMMERCE

Application for Data Science & Analytics Role

Dear Hiring Team,

About Me

Since joining Deutsche Post DHL in May 2018, I have built a foundation in advanced analytics within Global Business Services Global Controlling. Over eight years, I have grown from Controlling Expert to Senior Finance Data Engineer, delivering ML Forecasting pipelines, RAG-based AI assistants, and driving digitalization initiatives within Finance. Now, I am ready to move from supporting the business to driving it — within an operational division where analytics directly impacts P&L.

Why Me?

I bring a rare combination of technical depth and institutional knowledge. On the technical side: I am an AI and Analytics practitioner with deep familiarity with DHL's systems, processes and data landscape built over eight years with the firm in Finance.

My approach is simple: business problem first, technology second. I do not chase shiny tools; I try to find the right solution for the job. In my current role, this mindset has delivered measurable impact—reducing forecast variance, automating manual workflows, and putting AI assistants in the hands of finance teams.

And right now is the most exciting time to work at the intersection of operations, data, and AI. The field is moving at an incredible speed and I want to ride this wave and not watch from ashore.

I am open to relocating within Europe and would welcome the opportunity to discuss how my experience driving AI and analytics in Finance can translate to impact in an operational division.

Best regards,

Marius Theiß
